Subject: identity theft recommendations

To whom it may concern,

Please take into consideration the fact I will not use the internet for any banking or bill pay related services due to the fact identity theft is so widespread and rampant. My main concern is to install legitimate controls so my identity is known when and where I go on the internet. The TCG and a host of companies have submitted a proposal for hardware based security protection. I will be much happier using web based services when I know that these products are in the marketplace and available to me "off the shelf".

If hackers from around the globe or whom ever. Violates my privacy, I believe jail sentences should be handed down to stop them from proliferating this mistrust of such a valuable resource we possess in the world wide web. Secure it with hardware based trusted computing now.

Sincerely [redacted]
